AND TECHNICAL INSTRUCTION FOR IRELAND.

SIR,

I have the honour to submit the Annual General Abstracts of the Agricultural Statistics for Ireland, which give, by Counties and Provinces, the acreage under Crops and the numbers and classes of Live Stock in Ireland in 1910.

It should be stated that in order to make public at the earliest date the information obtained, the figures presented in this return are unrevised.

The Report is divided into two sections: I. Area of Land and Crops, and II. Number of Live Stock.

#### HAY.

The total area of hay in 1910 is returned as 2,421,587 acres as compared with 2,278,538 acres in 1909—an increase of 143,049 acres, or 6.3 per cent.:—

—	First Year's Hay	Second and Third Years' Hay	Hay from Permanent Meadow.

1909 . . . . .	408,035	832,963	1,447,540

Percentage . . . . .	3.6	3.7	6.4

The area under hay has increased in each of the four provinces.

## PASTURE.

The area of pasture, including mountain grazing, is returned as 12,456,258 acres in 1910, as compared with 12,541,014 acres in 1909—a decrease of 84,756 acres. In this connection it should be remembered that there are certain areas which it is always difficult to classify, and which one year may be returned as “grazed” land, and another year may be returned as turf bog, or barren mountain, but the grazing value of these areas is small. The important increase or decrease in pasture is best measured by the extent to which the area of crops and of hay has decreased or increased, for in such a statistical inquiry as the present the extent of the area under crops can be more exactly determined than the area of grazing land.

In 1909 there is a net increase in the area of corn and green crops, flax, and fruit, of 67,035 acres, and an increase in hay of 143,049 acres, making a total increase of 210,104 acres. This may be said to represent the actual decrease in the extent under pasture in 1910, leaving out of account the rough grazing land.

\*The Poultry figures for 1907, 1908, 1909, and 1910 are not comparable with those for the previous years. It is probable that the marked increase in 1907 and subsequent years is due in a great measure to a more complete record of young birds having been made in the last four years.
